### L2 - Low Friction Freight Car Brake Shoe

Anchor Brake Shoe Company is proud to introduce the all new, domestically produced, AAR M-996-04 Approved L2 1-1/2" Low Friction Brake Shoe for freight car applications.

Right out of the box, the L2 Low Friction Brake Shoe is the highest quality, longest lasting low friction brake shoe available for freight cars today. Like our Low Friction Locomotive Shoe, laboratory tests and field service trials show that the L2 has superior performance, and meets AAR requirements for stopping distance and spark suppression.

In M-996-04 laboratory testing, the L2 excelled in Stopping Distance performance

as well as Grade and Stop Wear Rate performance. In Stopping Distance tests, the L2 met all eight requirements. In Grade and Stop Wear tests, the L2 exceeded customer requirements for material loss.

In a recent service trial, the L2 turned in outstanding results, after only three months in service. At that point, all the L2 shoes were still in service and had over half their material remaining.

The choice is clear! Call your SCTC Sales Manager today for more details on the L2 Low Friction Brake Shoe. Also available in L4 2" thickness.
