Pedestal Shear Pads in Coal Service

March 2005

These are the SCT Pedestal Shear Pads that are on a set of S-2-E trucks in service. The pads were inspected after 400,000 miles of service. These are just a few of more than 70,000 Shear Pads that have been put into service since 1990.

Many of the pads have delivered over one million miles of service. Many more have passed the ½ million mile mark with no signs of fatigue.

SCT shear pads are low maintenance and easy to monitor. All you need to see for an in service inspection is completely visible from track side. The pads shown here are typical of the pads at this level of service.

SCT Shear Pads are the best performing, most durable M-976 pads on the market today. Include them in your next car build!
